

EXTENDED HEALTH AND DENTAL PLAN COST INCREASES UP SLIGHTLY

After experiencing relatively consistent annual increases in the cost of their extended health benefits and dental plans, employers will see a slight increase in these costs for 2009. Over the past five years, the average annual increase in the cost of extended health benefits has reached a high of 14.2% compared to the lowest annual increase of 13.5%. Similarly, the average annual increase in the utilization of dental plans remained at about the same level for previous years. However, for 2009 the average increase for dental plan utilization is higher.

ANNUAL SURVEY OF COST INCREASES

Prince Edward Island	1.92%	2.02%
2009 Increase in Plan Utilization		
	5.5%	5.2%

Overall Annual Increases in Dental Plan Utilization For the Past Five Years

Although the average dental plan utilization remained at about 4.5% for the previous four years, it increased to 5.2% in 2009.

SUMMARY

Trend and utilization factors should be used to project the increases required in premium rates to ensure that extended health and dental plans are adequately funded. However, the claims actually incurred by an organization's own employees are the biggest driver of plan costs. It is therefore important to regularly review the financial experience (i.e. claims incurred and premiums), the appropriateness of the funding (or risk sharing) arrangement with the insurance company, as well as the trend and utilization factors when negotiating appropriate renewal rates.
